PRIMARY MARKET**NEWS****Long-term financing conditions at record lows**

During its September auction of fungible Treasury bonds (OATs), Agence France Trésor (AFT) recorded the lowest rates for long- and very long-term financing ever seen in the history of the French Treasury.

The weighted average yield on 10-year bonds was 2.55% at the 2 September auction, almost 50 basis points lower than the previous record set during the last issue in July. On the 15-year segment, the yield fell by 54 bps between the July and the September auctions. The yield at issuance on 30-year bonds was 3.17%, 67 bps lower than the level obtained when the same bond was tapped in May.

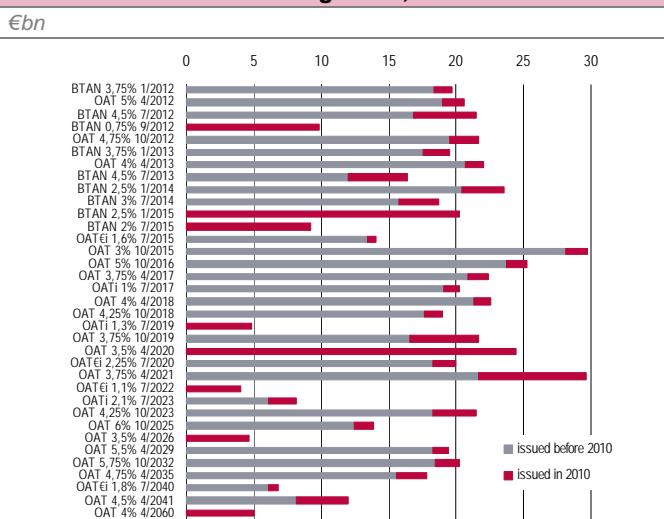

While this significant decline in yields at issuance can be attributed to market conditions, it also reflects strong investor demand for Treasury securities and confidence in France's creditworthiness. By issuing very long-term securities, i.e. 15 years and over, AFT is performing its role of minimising the debt burden and delivering sustainable financing at the lowest possible cost.

Non-conventional monetary policy in Europe: What prospects?

By Jürgen Michels, chief euro-area economist, Citigroup

At its September meeting the ECB's Governing Council extended the existing non-standard policy measures. Hence, apart from the usual collateral requirement, in 4Q banks will have no restrictions by using the ECB's 1-week Main Refinancing Operations (MRO), the 1 month special term operations and the 3-month Long Term Refinancing Operations (LTRO). As ECB rate hikes in 1Q 2011 look extremely unlikely, the announced change in the allotment procedure for the 3M LTRO — from a fixed rate to an average rate of the Main Refinancing Operations (MROs) over the life of the

► Euro Area Countries — Share of ECB Funding As Share of Total Assets

Source : Eurosystem and Citi Investment Research and Analysis

LTRO — is unlikely to have major implications. Nevertheless, this switch emphasizes the ECB's desire to go ahead with the exit from the non-standard policy measures early next year. As the periphery countries are very unlikely to solve their fiscal problems in the foreseeable future, the ECB probably will continue to provide the full allotment procedure in the 1-week MROs for a long time — probably years. That does not mean that the ECB will keep its interest rate at 1% for years. While the outlook of only modest growth and low inflation suggests that the first ECB rate hike is still far away, we expect a first modest rate hike by the middle of next year, probably in 3Q.

With its September decisions — including three fine-tuning operations, the ECB will try to smooth the expiry of €226bn in the 6M and 12M LTROs up to year-end. As was the case at the expiry of the €442 bn of the first 12M LTRO on July 1, banks are unlikely to replace the whole amount of the expiring very-long liquidity operations. Note that since the expiry of the first 12 M LTRO overall liquidity has shrunk by around €260bn. The main reason for this partial replacement is that banks with good access to the interbank market regard current rates for the 3M LTRO — that are below the ECB's key interest rate — as less attractive than they regarded the rates for the expiring operations (particularly the 12M) when they were provided. (Interbank rates at the allotment of the expiring 12M and 6M operations were above the ECB's key interest rate.) Although we expect a higher replacement-rate for the expiring 6M and 12M LTROs, a further reduction in overall liquidity between €50bn and €80bn by early 2011 looks very likely to us. This is likely to lead to further increases in money market rates.

With the ongoing fiscal problems of the periphery countries, we expect that the banks of those countries will have severe difficulties to get liquidity through the euro area interbank market. Indeed, data up to July highlight the importance of ECB funding for banks in the periphery countries (see figure). Hence, an abnormal market situation is likely to stay with us for a long time.
